

10 Year Summary									
1992	1993	1994	1995	1996	1997	1998	1999	2000	2001
38,110	35,899	39,122	42,237	42,539	44,593	45,303	44,493	44,943	45,204

	Q1	Q2	Q3	Q4	Average
2001	44,916	45,047	45,579	45,265	45,204
2002	46,341	46,941	47,438	46,541	46,817

2002's inmate population appears to contain the highest number of non-sentenced inmates on record. On average, the increase in non-sentenced inmates is proportional to a reduction of sentenced inmates; 2002 had not only a reduction in sentenced felons but also the lowest number of sentenced misdemeanants on record. This may help explain the rise in the ADP as other factors are taken into account. Non-sentenced felons, for example, receive fewer O.R. releases, have higher bails set by the court, and as well as misdemeanants are not eligible for alternatives programs in lieu of incarceration. These lead not only to a higher ADP, but could also have a direct effect on the average length of stay.
